

Postscript ¹

Just before writing up this Postscript, I drank non-alcohol beer. My family has prohibited me from drinking alcohol for the last 16 years, when I retired from Hiroshima Shudo University. Honestly speaking, emergency medical care Hibino Hospital midnight accepted my accidents three times (at home, drinking-party and hotel, downtown) to save my life. Disease name is ‘acute alcohol intoxication.’

Why? My seminar students told me, “yes, weak alcohol” but, strong alcohol was mixed behind and I could not stand up at all. My body suddenly turns to no bone body. Yet, strange to say, I could cry out, “All of you are accomplice.” They do sometimes extreme. Everything is balanced, as shown in purely endogenous equilibrium. I was a laboratory table as learning by doing.

Although non-alcohol beer has no alcohol, I feel much better. I feel as if I drank a little bit. Why? I do not know.

Now sincerely, I have been suffering from the whole design sketching of this book. Naturally, I rely on a few of benefactors in my life-work. Keno Kumasaki, 熊崎健翁, is versed in intuitive numbering, differently of mathematicians. By 80, all numerous numbers are each circulated. Within 80, good numbers are 5, 13, 16, 23, 32, 44, 47, 48, and 65. I look at car’s number when I meet some of good friends. Their car numbers are always good. I understand that good people are given good numbers. Therefore, the total number of essays is 44 in this book.

Turning to colors, Tao 陰陽 in old China prefers five colors, five items, five parts and so on to other sets of numbers, as I concretely indicated the essence of Tao, at Preface and some of six Parts. I understand, the essence of Tao inevitably overlaps hyperbola philosophy. I am indifferently for repeating the same wording in English.

In short, I do not trust probability or assumption. I trust learning by doing, where theory equals practice. And, any information must be fair and open at the same time, just like under the market principles. We are gradually nearer to natural science behavior but, without useless consumption of money for extreme money-making. And we feel happy always since extremes, seen and unseen, are balanced static and dynamic.

Readers, please at any time communicate together to correct and accurate whatever.

I am delighted to be able to add one page to the above. Unexpectedly, in a week, I could find and confirm two human discoveries. Further, I was, without pause, given this additional page by Better Advances Press (BAP), Toronto. What are two human

¹ The author is sincerely most happy in the world, as he thinks of this fact and repeats this given good fortune to be published by Better Advances Press, Toronto, in August 2016.

Historic Variety on the Earth

discoveries above? One is unique farming method to produce pyrrole brown rice and, the other is a set of three materials which is composed of D-water or real water, wonder-sheet (Bio Activation Inducement), oligosaccharide, and plum-salt sinter. Who is respective historic discoverer? Surprisingly to say, Mr. Yosaku Kuroda 黒田与作, Fukui, Japan, for pyrrole brown rice and, Mr. Hitoshi Hattori 服部一志, Okayama, Japan, for three materials. What are reasons for pyrrole brown rice?

Due to acid rain today, sperm of man turned to weak-acid from weak-alkali. It means babies are not born any more on the earth. Further, roughly two years or so, this fact appears and math-media discloses naturally. Besides, today's fishing is not natural and needs chemical antiseptic solution. As a result, stench smell at farms shallows spread in the sea. Only solution has been proved by the use of pyrrole germ/bacteria. It implies that natural way of solution lasts forever, free from chemical symptomatic treatment. Pasture is similar; herbicide and disinfectant put business into no more continuation. In short, starting from fishing, chemical use began to stop, which farmers and fishermen know these background and they are now using natural materials. It implies that human began to recover natural green cycling.

The rate of technological progress is not given (as shown in the related literature) artificially but produced 'purely endogenously.' Accordingly, the rate of growth at the macro-basis cannot be controlled but is measured accurately, where today the rate of growth in GDP is already extremely low. Policy makers and leaders cannot manage at all. If the reverse policies are taken, then the re-reversed is strengthened. This is the spirit of Tao in old China and also the feeling of moderation in Confucianism.

When did I study the above everlasting facts or, one of two historic discoveries for pyrrole germ/bacteria? The dates are 2nd and 3rd, July 2016. Kuroda and I have spent a whole day together. I am sincerely thankful to Yosaku Kuroda, the historic world discoverer on 3rd of July, while summing up the whole story. I do not here disclose the other historic discovery by Hisashi Hattori. Why? Differently from pyrrole germ/bacteria, people and individuals do not yet commonly perceive a set of three materials such as D-water, even in Japan. Lastly, I repeat my thankfulness given by Yisheng, one of my best friends in the world.

In our human societies on the earth, anyone lives by following the variety by the 'anyone' who is perfectly responsible for whole results. By God/Heaven, if the 'anyone' has blood relatives, whole results attribute solely to the 'anyone' and/or blood.
